Harsh Chemical Usage

Carefree Clearwater

**NOW YOU HAVE
A CHOICE**

IT PAYS...

to change to ionization. It just makes dollars and \$ense. The paybacks are real in money, time savings, better health, and the pleasure of clean pure water.

*ENJOY
THE
PLEASURE*

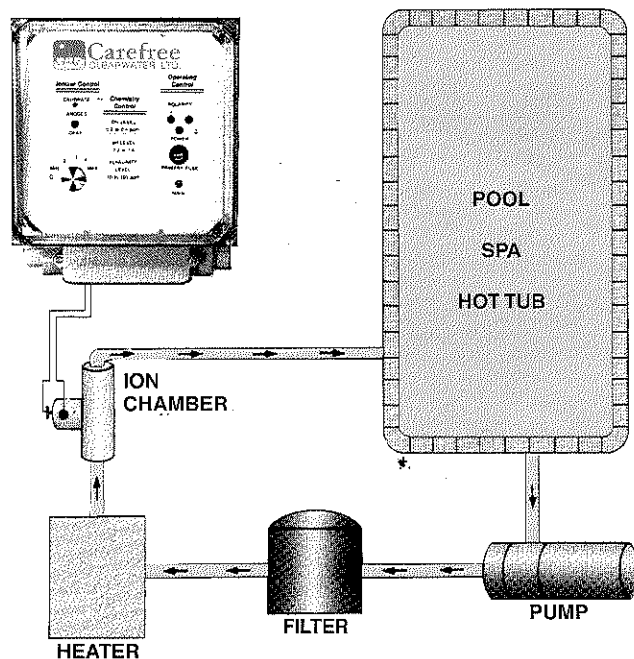

**Carefree
Clearwater**

Water has been successfully treated with copper and silver for centuries. The technology was perfected when NASA developed an electronic system to purify drinking water for use aboard spacecraft for the Apollo missions.

The Carefree Clearwater system electronically releases copper and silver ions into the water where they destroy bacteria and algae—which are then filtered out.

Typical Installation

Ionization. . . is a lot less expensive than chemical sanitizers. It eliminates exposure to high levels of toxic chemicals.

Money savings. . . Saves thousands in future chemical costs. Also saves money by eliminating bleaching and other damage to hair, pool equipment and nearby plants and flowers.

Time savings. . . No more daily testing, dosing and handling chemicals. Automatically keeps your water algae and bacteria free. Unlike other chemical sanitizers, mineral ions are unaffected by heat and sunlight, providing constant protection and safe water.

Simple maintenance. . . Ions are pH neutral and will not affect water balance. Periodic water testing, occasional oxidizing, along with a low level halogen are all that's needed.

Eliminate irritation. . . No more burning eyes, dry skin, bleached and damaged hair, offensive chemical odors, allergic reactions. Enjoy swimming in refreshing mineral water.

Healthy. . . for you and your family. The minute levels of copper and silver even satisfies EPA drinking water standards. Copper is a daily dietary requirement and silver has long been used as a purifier.

Safe. . . First developed by NASA to purify drinking water. The solid state electronic controls produce very low current—like several flashlight batteries, enclosed in a weathertight case. The equipment meets UL standards.

Simple. . . Automatic. Anyone can operate or install it. Easily added to existing equipment.

Uses include numerous commercial and non-commercial applications. . . such as swimming pools, hot tubs, spas, and decorative fountains. For plaster, vinyl, fiberglass and all other surfaces.

Lifetime warranty. . . Rugged and durable design protects electronics from moisture, corrosion and harsh environments. Reliable solid state circuitry. No moving parts.
